

BETTER MOBILITY TODAY

PASSENGER INFORMATION SYSTEMS

WHAT?

ENGIE has a complete public-transport passenger information offer.

- **From designing to implementing the infrastructure**, ENGIE adapts to the client's needs to offer users an accessible, convenient and reliable service.
- ENGIE offers **real-time passenger information** through efficient positioning and communication technologies.

ENGIE's range of passenger-information systems can be set up as part of a **comprehensive passenger information and operational support system (SAE / SAEIV)**.

WHY?

- Between 2001 and 2012, **the share of public transport increased by 20%** in all urban transport in developed countries.
- **60% of the world's population will live in towns in 2050**. Strong environmental pressure compels us to limit the use of personal vehicles and opt for public transport instead.
- **ENGIE is a leader in the market**, with recognised technologies used in over 150 transport networks worldwide.

HOW?

- ENGIE handles the **integration, operation and maintenance** of natural gas filling stations.
- Its wide partner network enables the Group to offer a **complete turnkey solution** that is tailored to local challenges.
- **Station models are entirely adapted** to the client's needs: whether it's a public, semi-public or private station, ENGIE supports and advises the client to optimise costs and maximise the efficiency of the infrastructure.

FOR WHOM?

Municipalities and transport operators.
