

BETTER MOBILITY TODAY

RENEWABLE ELECTRICITY FOR VEHICLES

WHAT?

ENGIE has considerable green power-generation resources that position the group as a **leader in this market**.

In France, the group even offers exclusively green electricity contracts to its individual clients, to make the energy revolution a reality.

For individuals and professionals who are concerned about their environmental footprint, the group uses this DNA to offer **green energy contracts** suited to the consumption needs of electric vehicles.

WHY?

- **92% of the earth's inhabitants** today are exposed to poor air quality, according to the WHO, particularly in large cities.
- Developing electric transport is a major lever **to fight pollution** and purify the air in towns.

HOW?

For its green electricity offer, ENGIE ensures that the equivalent of the amount of electricity consumed is produced at plants **that use renewable energy sources** and injected into the grid. The Guarantees of Origin system certifies that for each kWh of energy consumed, ENGIE buys the equivalent in electricity produced from renewable sources.

FOR WHOM?

- Individuals
- Companies
- Municipalities
