

BETTER MOBILITY TODAY

SMART FLEET MANAGEMENT

WHAT?

ENGIE offers a complete public-transport fleet management solution. ENGIE offers a complete Operational Support Systems solution that includes onboard equipment in vehicles, application software, and monitoring and maintenance services.

ENGIE adapts to clients' needs and contexts to optimise the accessibility and punctuality of public transport. ENGIE's range of operational support systems can be set up as part of a complete passenger information and operational support system (SAE / SAEIV).

WHY?

- Between 2001 and 2012, **the share of public transport increased by 20%** in all urban transport in developed countries.
- **60% of the world's population will live in towns in 2050.** Strong environmental pressure compels us to limit the use of personal vehicles and opt for public transport instead.
- **ENGIE is a leader in the market**, with recognised technologies used in over 120 transport networks worldwide.

HOW?

INEO Systrans, a subsidiary of the ENGIE group, daily develops the group's excellence to the benefit of transport operators. For the past nearly 40 years, its expertise in Passenger Information and Operational Support Systems (SAE / SAEIV) has enabled it to equip more than 35,000 buses and 1,800 trams with self-developed onboard systems and application software.

From the design to the maintenance of the systems, Systrans is a sought-after partner for municipalities and transport operators. With its wide network of innovative partners and a dedicated R&D team, Systrans positions itself according to the best market standards.

FOR WHOM?

- Municipalities
- Transport operators
